#### IV. Final Sort

## V. Analysis

These studies were conducted using paper cards; there were two subjects involved. The first subject fit the persona of a kid exploring the Internet. The second subject had a general interest in puzzles and classic games, such as Monopoly, Clue, etc. Based on the studies it is easy to see that most of the cards appear in the same categories across different studies. The only cards that varied were related to the topics list and the about page for the creator. Since the about page was in the orphaned group in all of studies, it would be best to leave it out of the website. The topics list and the option to add to the list are nice additions to the website. However, they are not necessary in order for the website to function properly. These cards still remain, but are being placed in different categories rather than creating a new category just for them.
